

Live TV show with SMS (using ORAD Virtual howto)

{jfalternalive}50|content|There are no translations available{/jfalternalive}

In this video is presented a live Television broadcast with scrolling SMS on video text machine.

To integrate your foxbox with Orad Virtual graphic simply doenload and apply this patch.

Download Patch

To apply the patch simply upload using FTP or SCP (username: root password:pass) the 2 files contained in the oradxml.zip archive to /mnt/flash/root/source/ on your foxbox. You have also to create a folder called xmlexp inside /mnt/flash/root/xmlexp

The main incoming SMS page will allow you to export SMS messages directly to the text machine.

The scrolling Short Messages are interfaced using XML function to Orad Virtual Studio TV graphics but probably it should be adapted to any textile machine.
