

SMS GATEWAY FOR INFRASTRUCTURE

FoxBox SR

SMS belongs in your rack.

A 19-inch gateway that connects application notifications and operational alerts to the SMS route your organization chooses.

INTERNAL OPTION

WHY CONSIDER IT

In your rack

Bring the SMS path into your infrastructure. Select the variant before planning network and power requirements.

Your chosen route

Use local SIMs or design external SMPP/HTTP services through Kannel. Each route has its own requirements and dependencies.

From your systems

Connect applications and monitoring through a compatible HTTP API. External adapters translate events into requests.

FoxBox in Italy. Milan headquarters, Lake Como offices. Selling since 2010.

CONFIGURATION AND PROCUREMENT

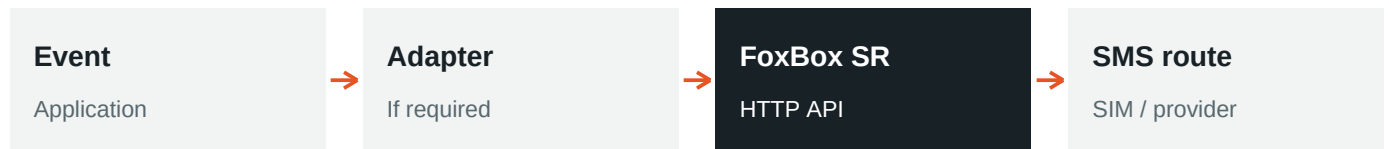

Choose the configuration.

Three catalog choices produce eight variants. Check the product page for current price and availability.

MODEM	NETWORK	NO UPS	INTERNAL UPS
2 modems	4G/LTE	Variant	Variant
2 modems	5G	Variant	Variant
4 modems	4G/LTE	Variant	Variant
4 modems	5G	Variant	Variant

Base warranty: **12 months**. Optional UPS: confirm runtime and protected loads. No continuity duration is implied.

FROM SOFTWARE TO SMS

Experimental prototypes: Zabbix, PRTG, Grafana, Synology DSM, Node-RED. External adapters with local tests; compatibility and delivery need validation.

BEFORE APPROVING THE ORDER

- ☐ **Mobile network:** country, bands, operator, SIM and compatible plan.
- ☐ **Installation:** rack, antennas, LAN and power arrangement.
- ☐ **Integration:** software, firmware, authentication and event bursts.
- ☐ **Acceptance:** distinguish API acceptance, queue state and SMS delivery.

Modem count does not establish failover or throughput. The SIM route needs an operational local path and mobile coverage; an external route needs connectivity and a provider contract.
